

Maths:

- Follow a recipe with a family member. Help them to **weigh** the ingredients that you need
- **Estimate and measure the length** of 10 objects in your house (you can use a ruler or measuring tape).

Use a grid table for this. You can draw it in your Maths copy. Here are some ideas for things you could measure. You don't have to do these ones but it's a start!!

Object	Estimate	Measure
Kitchen table		
Bed		
TV		
Part of the path		

- Go on a **2D and/or 3d shape hunt** in your house/ garden and record the shapes that you find. Record how many faces and edges that these shapes have
- Practice your **tables** – work on from +3 and x3. DO your tables games like The Clock or D'Oh if you have a dice.
- Write a **timetable** of your day. You can use analogue or digital time. You could include things such as; what time you woke up at, what time you ate breakfast/lunch/dinner, when you played/ did school work, what time you went to bed etc.
- Continue in your Master Your Maths books and do the Fri test!
- **Money**: set up a shop. Ask for permission first!! Make little price tags for the items you sell. You could do a food shop, a clothes shop, a sports shop, a toy shop, a book shop! Ask for some coins from an adult (it might be good to wash them first 😊). Maybe someone can come to you shop and buy some things from you. You need to work out the change and don't forget to offer them a bag!!
